

TIRUMANI JYOTHI SRIKANTH

Bangalore, India

Phone: +91 9985926992

Email: sritirumani04@gmail.com

Professional Summary

Motivated MCA graduate with strong knowledge of Python, SQL, HTML, CSS, JavaScript. Hands-on experience in technical support, software development, and database management through internships and academic projects. Passionate about solving real-world business problems using technology and committed to delivering high-quality solutions while continuously learning, adapting, and contributing effectively in a collaborative and growth-oriented work environment.

Skills / Technologies

- **Programming Languages & Frameworks:** Python, Flask
- **Web & Backend Technologies:** HTML, CSS, Bootstrap5, REST APIs
- **Database:** MySQL, SQL
- **Tools & Version Control:** Git, GitHub, Visual Studio Code
- **Soft Skills:** Quick Learner, Communication, Teamwork, Problem Solving, Analytical Thinking, Adaptability

Education

Master of Computer Applications | Presidency University | 2024-2026 | Bangalore

Bachelor of Computer Science | Sri Aditya Degree College | 2021-2024 | Bhimavaram

Internship Experience

AI Intern – I Studio | 2025

- Developed and optimized machine learning models through data preprocessing and training
- Applied ML algorithms to solve real-world business problems
- Improved model performance using evaluation and tuning techniques

Python Full Stack Development Intern | GlobalOne Services, Hyderabad •

Developed web applications using Python, HTML, CSS, and JavaScript.

- Integrated frontend and backend with database operations.
- Tested and debugged applications in a collaborative team environment.

Core Java Development Intern | Adhoc Network Tech Company | Sep 2023 – Oct 2023

- Developed Java applications using OOP concepts and Collections.
- Assisted in testing and debugging application modules.
- Collaborated with the team to deliver project components on time.

PROJECT 1

Project: Project: VehicleVision– Real-Time Overloaded Vehicle Detection System

Role: Full Stack Developer

Environment: Python, Flask, YOLOv8, OpenCV, MySQL, HTML5, CSS3, JavaScript, REST APIs, Git.

Description:

Developed an AI-based real-time overloaded vehicle detection system using YOLOv8 and OpenCV to identify overloaded vehicles from live camera feeds. The application automatically captures image and video evidence, stores detection records in a MySQL database, and displays results through a web-based dashboard, improving traffic monitoring and road safety.

Responsibilities:

- Developed a responsive web dashboard using Flask, HTML5, CSS3, and JavaScript to display vehicle detection records.
- Integrated YOLOv8 and OpenCV for real-time vehicle detection, tracking, and overload identification from live video streams.
- Implemented automatic image and video capture for overloaded vehicle evidence.
- Designed and managed the MySQL database to store vehicle information, detection history, and captured evidence.
- Built backend modules for detection, tracking, rule validation, and database management using Python.

- Integrated frontend and backend components using REST APIs for seamless data communication.
- Performed application testing, debugging, and performance optimization to ensure reliable real-time detection.
- Used Git and GitHub for version control and collaborative development.
- Followed modular development practices to build a scalable and maintainable application.

PROJECT 2

Project: SmartRail – Railway Reservation System

Role: Full Stack Developer

Environment: Python, Flask, SQLite, HTML5, CSS3, JavaScript, REST APIs, Gunicorn, Git

Description:

Developed a full-stack railway reservation web application inspired by IRCTC that enables users to search trains, book tickets, manage reservations, track PNR status, and download e-tickets. The application includes secure user authentication, online payments, waitlist management, loyalty rewards, and an admin dashboard for efficient train and booking management.

Responsibilities:

- Developed responsive user interfaces using HTML5, CSS3, and JavaScript for train search, booking, payment, and user dashboard.
- Built backend modules using Python and Flask for authentication, train management, ticket booking, and PNR tracking.
- Designed and managed the SQLite database using Flask-SQLAlchemy for users, trains, bookings, passengers, and wallet transactions.
- Implemented secure user authentication with bcrypt password hashing and session management.
- Developed features including multi-passenger booking, waitlist management, loyalty points, wallet payments, and refund processing.
- Integrated PDF ticket generation, email notifications, and live train status updates.
- Performed application testing, debugging, and performance optimization to ensure a smooth booking experience.
- Used Git and GitHub for version control and collaborative development.
- Followed MVC architecture and Agile development practices to build a scalable and maintainable application.

PROJECT 3

Project: Platora – Food Ordering Web Application

Role: Full Stack Developer

Environment: React.js, Node.js, Express.js, MongoDB, Mongoose, HTML5, CSS3, JavaScript, REST APIs, Git

Description:

Developed a full-stack MERN-based food ordering web application that enables users to browse food menus, manage shopping carts, place orders, apply coupons, and track deliveries in real time. The application features secure JWT authentication, responsive user interfaces, order management, and a scalable RESTful backend for seamless food ordering and delivery.

Responsibilities:

- Developed responsive UI using **React.js, HTML, CSS, and JavaScript**.
- Built **RESTful APIs** using Node.js and Express.js.
- Managed **MongoDB** databases using Mongoose.
- Implemented **JWT, bcrypt, and OTP-based authentication**.
- Developed **cart, checkout, payment, and order tracking** features.
- Integrated frontend and backend using **Axios**.
- Implemented **search, coupons, reviews, themes, and profile management**.
- Used **Git/GitHub** and followed **MVC architecture**.

Certifications & Achievements

- Database and Java Foundations - Oracle Academy
- Build Your Own Static Website (HTML, CSS) - NXT Wave
- Build Your Own Responsive Website (Bootstrap, Flexbox) - NXT Wave
- AI & ML using Python – Infosys Springboard
- Generative AI Foundations – Infosys Springboard
- Participated in University-level Hackathon and developed a functional real-time web application prototype
